

# Weekly Report

Aug 21st ~ Aug 27th

## Done

1. The majority of the work done week is revision of BotRadar.
  - Paper:
    - Fix minor issues in writing
    - Removing `streaming` to avoid ambiguity and critiques from reviewers
    - Algorithm reformatting
    - Add radar view algorithm and visual encoding
    - Determine the framework of user study and expert review. (similar to BeXplorer)
  - System:
    - Fix bugs
    - Discuss and design legends
    - Some user interaction added
2. 律师 has phoned me on the patent. The major issue is the lack of this system's application. Since I am working on the new case studies, I will finish that after new cases are ready.
3. Listen to talk by Panpan Xu on her VIS paper this year. Her paper as well as her talk are easy to follow, to understand. The color scheme used, the algorithm and the system are tightly integrated. As Prof. Wu said, she had read lots lots of books. Also, she has to communicate with her colleagues in BOSCH frequently (since her work corporates with other dept. and can be more easily transformed into real applications), which makes her look quite confident and 从容 while doing her presentation. I hope one day I can be just as calm as her.
4. Go to the dentist and fix problems. One more need to be done next Friday.

## To Do

1. Cases, user study, expert review. I will try my best.
2. Start the ppt slides of 研究生新生素质培养课程. Also try my best.

## Paper

项目	专利	BotRadar	研究生新生素质培养
截止日期	9-10	9-10	9-14
进展	律师说就差个 case study, 别的没啥大问题. 后面在我英文写完以后补上, 如果实在来	系统上仍有小部分改进; 按照计划下周应该做完, 除了视频以外部分. 尽力.	整合内容, 走之前做完应该没大问题.

	不及到了美国用微信 电话继续.
